Dinosaur Run

Group Members: Smaiyl Makyshov, Andrew Sun, Orion Bloomfield, Lucas Stevens.

<u>Setting up & Playing</u>

1. Open the zip folder that you have downloaded (unzip it)
2. Now you should load your project into android studio - there are several ways to do this. One such way is to click File -> Open, and then navigate to the zip folder. Inside the zip folder, you will find DinosaurRun folder which has an android icon next to it (meaning it is able to be loaded in Android Studio). Select that folder and load it into Android Studio.
3. Run the app in the Android Studio (You can choose to run either on an emulator or on a device - we strongly encourage you to run it on a device).
4. Press Start Game, and make sure your view your phone in landscape mode
5. Enjoy the game! Various obstacles will come at you at different speeds - to avoid them, you can either jump or duck. To duck, touch the right side of the screen. To jump, touch on the left side of the screen.
6. Do not hit the obstacles! Once you one of them, you lose. Try to stay as long as possible avoiding the obstacles.
7. Your score will be based on how long you are able to stay (proportional to how many obstacles you avoided).

Have fun! :)
